

Monitor, audit, and control OpenVMS session activity

System Detective™

PointSecure's System Detective is a powerful security and auditing solution that helps to identify who did what, when, and how on your OpenVMS systems.

What is System Detective?

System Detective helps you ensure compliance with regulatory and data security requirements such as HIPAA, GLBA, Sarbanes-Oxley, PCI and Basel II by providing ways to mitigate risk, produce audit trails and alert on session activity. This robust tool goes beyond traditional auditing by providing security controls to safeguard against potential system misuse and non-compliance by triggering and automating the remediation of policy violations.

As data security and regulatory compliance requirements have become increasingly stringent, System Administrators are tasked with the immense job of providing an accurate, immutable audit trail of activities such as access to information and system changes as well as protect the system from misuse and abuse all while performing numerous other systems management activities. Unfortunately, providing this audit information can often mean weeks or months of custom development or in some cases the deployment of full time staff to provide regular reports to auditors. System Detective eliminates this overhead by providing real-time session monitoring, auditing and incident remediation providing quick, easy, trusted and non-repudiated answers no matter how many OpenVMS systems are in your environment.

Product Highlights

- ➔ Produce logs of session activity
- ➔ Proactively responses to security events
- ➔ Alert on session activity and policy violations
- ➔ Enhance protection of sensitive information
- ➔ Safeguard systems from potential misuse by elevated users
- ➔ Recover from operation errors with audit trails
- ➔ Review recorded session log files
- ➔ Create reports of session activity

System Detective™

Key Benefits

COMPLIANCE System Detective helps you comply with government, industry and corporate regulations or policies by providing access control, auditing, and reporting capabilities.

CONTINUOUS AUDITING System Detective provides real-time monitoring and auditing of session activity that is highly configurable to meet your requirements.

IMMEDIATE NOTIFICATION System Detective can be configured to alert on suspicious activity via the system console, event database, or e-mail. The alerting engine includes powerful features such as flexible alert definition, custom messaging and alert reporting.

INCREASED PRODUCTIVITY By automatically monitoring processes and taking a proactive response, System Detective reduces staff requirements by minimizing the need to manually monitor OpenVMS systems and take appropriate action thus freeing up resources allowing System Administrators to concentrate on other activities.

IMPROVED SERVICE LEVELS By taking automatic responses, problems can be stopped before they occur or resolved faster before systems are adversely impacted.

Technical Features

SESSION AUDIT LOGS Maintain log files of monitored sessions for auditing or analysis enabling you to demonstrate compliance with regulatory requirements.

REAL TIME MONITORING Monitor sessions to identify problematic events and allow appropriate responses to be taken.

ACCESS CONTROL Restrict access to confidential, protected data using an automated rules based engine.

EVENT BASED ALERTING Monitor session activity for critical events and alerts when an event is triggered.

CUSTOMIZED EVENT DETECTION AND NOTIFICATION Customize System Detective to monitor for certain events and alert and/or take action in response to the event.

AUTOMATED OPERATIONS Configure System Detective to take automated responses to events to meet your requirements. Alerts and responses can be configured on an event by event basis.

INACTIVE SESSION MANAGEMENT Manage inactive terminal sessions protecting systems from misuse.

REPORTING Create customized reports based on security events.

LOG REVIEWING Quickly and easily review session log files.
